NG Design

NG Design is a multidisciplinary studio operating at the crossroads of architecture, product design, and art. Known for its inventive use of materials and strong narrative sensibility, the studio develops work that moves fluidly between installations, furniture, and lighting. Each project is grounded in a rigorous conceptual framework, yet remains open to playful experimentation and intuitive discovery. At the heart of NG Design's practice is a tactile dialogue between form, function, and cultural context. Objects are conceived not merely as functional elements, but as carriers of emotion and imagination—pieces designed to be lived with, desired, and remembered. This approach results in furniture and lighting that balance clarity of purpose with expressive presence, inviting a deeper connection between object and user. All NG Design creations are handcrafted in Poland, where close collaboration with skilled artisans ensures a high level of material integrity and craftsmanship. Through this hands-on process, the studio brings its dreamlike visions into tangible form, producing thoughtful, enduring objects that merge conceptual depth with human touch.
